

Abstract/Proposal Title:

Increasing the eLearning Capabilities in Land Forces Academy

Abstract/Proposal description:

One of the most recent initiatives from a long campaign designated for developing the information technology advantages during education and training performance in our academy is Advanced Distributed Learning. Even if ADL is applied in different ways and for different military and civil organizations has various meanings, a common request is that ADL has to instruct and sustain the performance and decision anytime and anywhere: in the class rooms, in the garrison, or even on the training and battle field. The paper will present aspects according with the followed objectives in the implementation of the asynchronous e-learning solution named e-plasticity, as a CNCSIS grant outcome.

Implications for Practice:

The exchange of experience: the conference paper is related to work that we have undertaken to improve student learning as part of our practice of scholarly teaching

Significant Outcomes/Insights:

1. The educational module (online book)
2. The test module
3. The site <http://www.armyacademy.ro/cercetare/eplasticity/>
